

One transformer block, 103 tokens

What changed

None of it alters a single encrypted operation.

- Thread affinity and NUMA-local allocation
- Encode once, clone per use
- Parallel batched encoding across 32 cores
- Encode at the level of use, flush between stages
- Release host-side key copies after upload

Identical at both ends

156 dense products · 177,734 ciphertext–plaintext and
1,506 ciphertext–ciphertext multiplications · 8,173 rotations
857 client boundary crossings · multiplicative depth 13
the same frozen plaintext reference, reproduced to 4.6×10^{-9}

A whole 26-hour inference becomes 17 minutes to 2.2 hours

projected across the encrypted-scope tasks, at fixed circuit
