

One ciphertext holds 32,768 slots

4 copies × 1,024 features × 8 token lanes = 32,768 slots. The copies carry the 4× MLP expansion.

GSR: 600 bp become 103 tokens in 13 groups

600 bp ÷ 6-mer = 100 tokens, plus 3 task specials = 103. 103 tokens across 8 lanes rounds up to 13 groups; the final group is partly padded.

The 13 groups give 91 lower-triangular causal score tiles, and just 1 of the 104 lanes is padding.
