

(c) Encrypted evaluation: 6,595 s of 6,683 s wall clock

(d) Host memory per stage, one block, bounded cache

(e) Prompt length sets the causal score-tile schedule (derived, not timed)

Outside the encrypted scope: mRNA abundance regression needs 1,755 tokens and 220 groups, or 24,310 score tiles — a different regime, not a longer prompt.
